PMP® PDU continuing Education units available.

Software development is a team sport and every member of that team shares responsibility for quality. This track is dedicated to the best practices that can help software development teams improve the functionality, performance, and availability of complex applications. This track is for quality assurance and testers, as well as anyone else on the project team - analysts, architects, developers, deployment managers - looking for valuable, actionable information that can be used to build quality into applications from the beginning.
